SELF PRESENTATION

My Path

Research Topic

FORMALLY: "SOCIAL ROBOTICS FOR ELDERLY ASSISTANCE"

Supervisor: Elisa Ricci

PRACTICALLY: ANONYMISATION THROUGH GANS TO PRESERVE PRIVACY

Ultimate goal: Temporal-coherent analyses-preserving anonymisation framework

Previous Work(hopefully I can an 's' soon)

AnonyGAN - ICIAP 2021

- Based on Hao's BiGraphGAN^[1] bipartite graph formulation
 - Perform geometric reasoning among face landmarks to preserve pose
- Outperforms SOTA in terms of visual naturalness and pose preservations, still lags in terms of anonymisation

1. Tang H. et al., Bipartite Graph Reasoning GANs for Person Image Generation, 2020

From Now On (chasing ECCV)

- Perform face swapping in low-resolution, where faces are still recognisable but SOTA fails
 - Curriculum learning on resolution, performing face swap in high-resolution is easier
- In the end, adaptive face swapping, therefore not limited to particular resolution
